

Seaweeds

**our primary resource
our major responsibility**

Seaweeds production is a multi-billion-peso industry in the Philippines and a major aquaculture commodity in Tawi-Tawi. Unfortunately, it faces decline due to diseases, improper agronomic practices and poor environmental conditions caused by climate change.

As a response, the **Sitangkai Seaweed Industry Development Council** was created and a **Sitangkai Seaweeds Master Plan** was developed, supported by an enhanced Coastal Resource Management and improved enforcement programs.
