

Marine Protected Area for Coral Triangle Countries

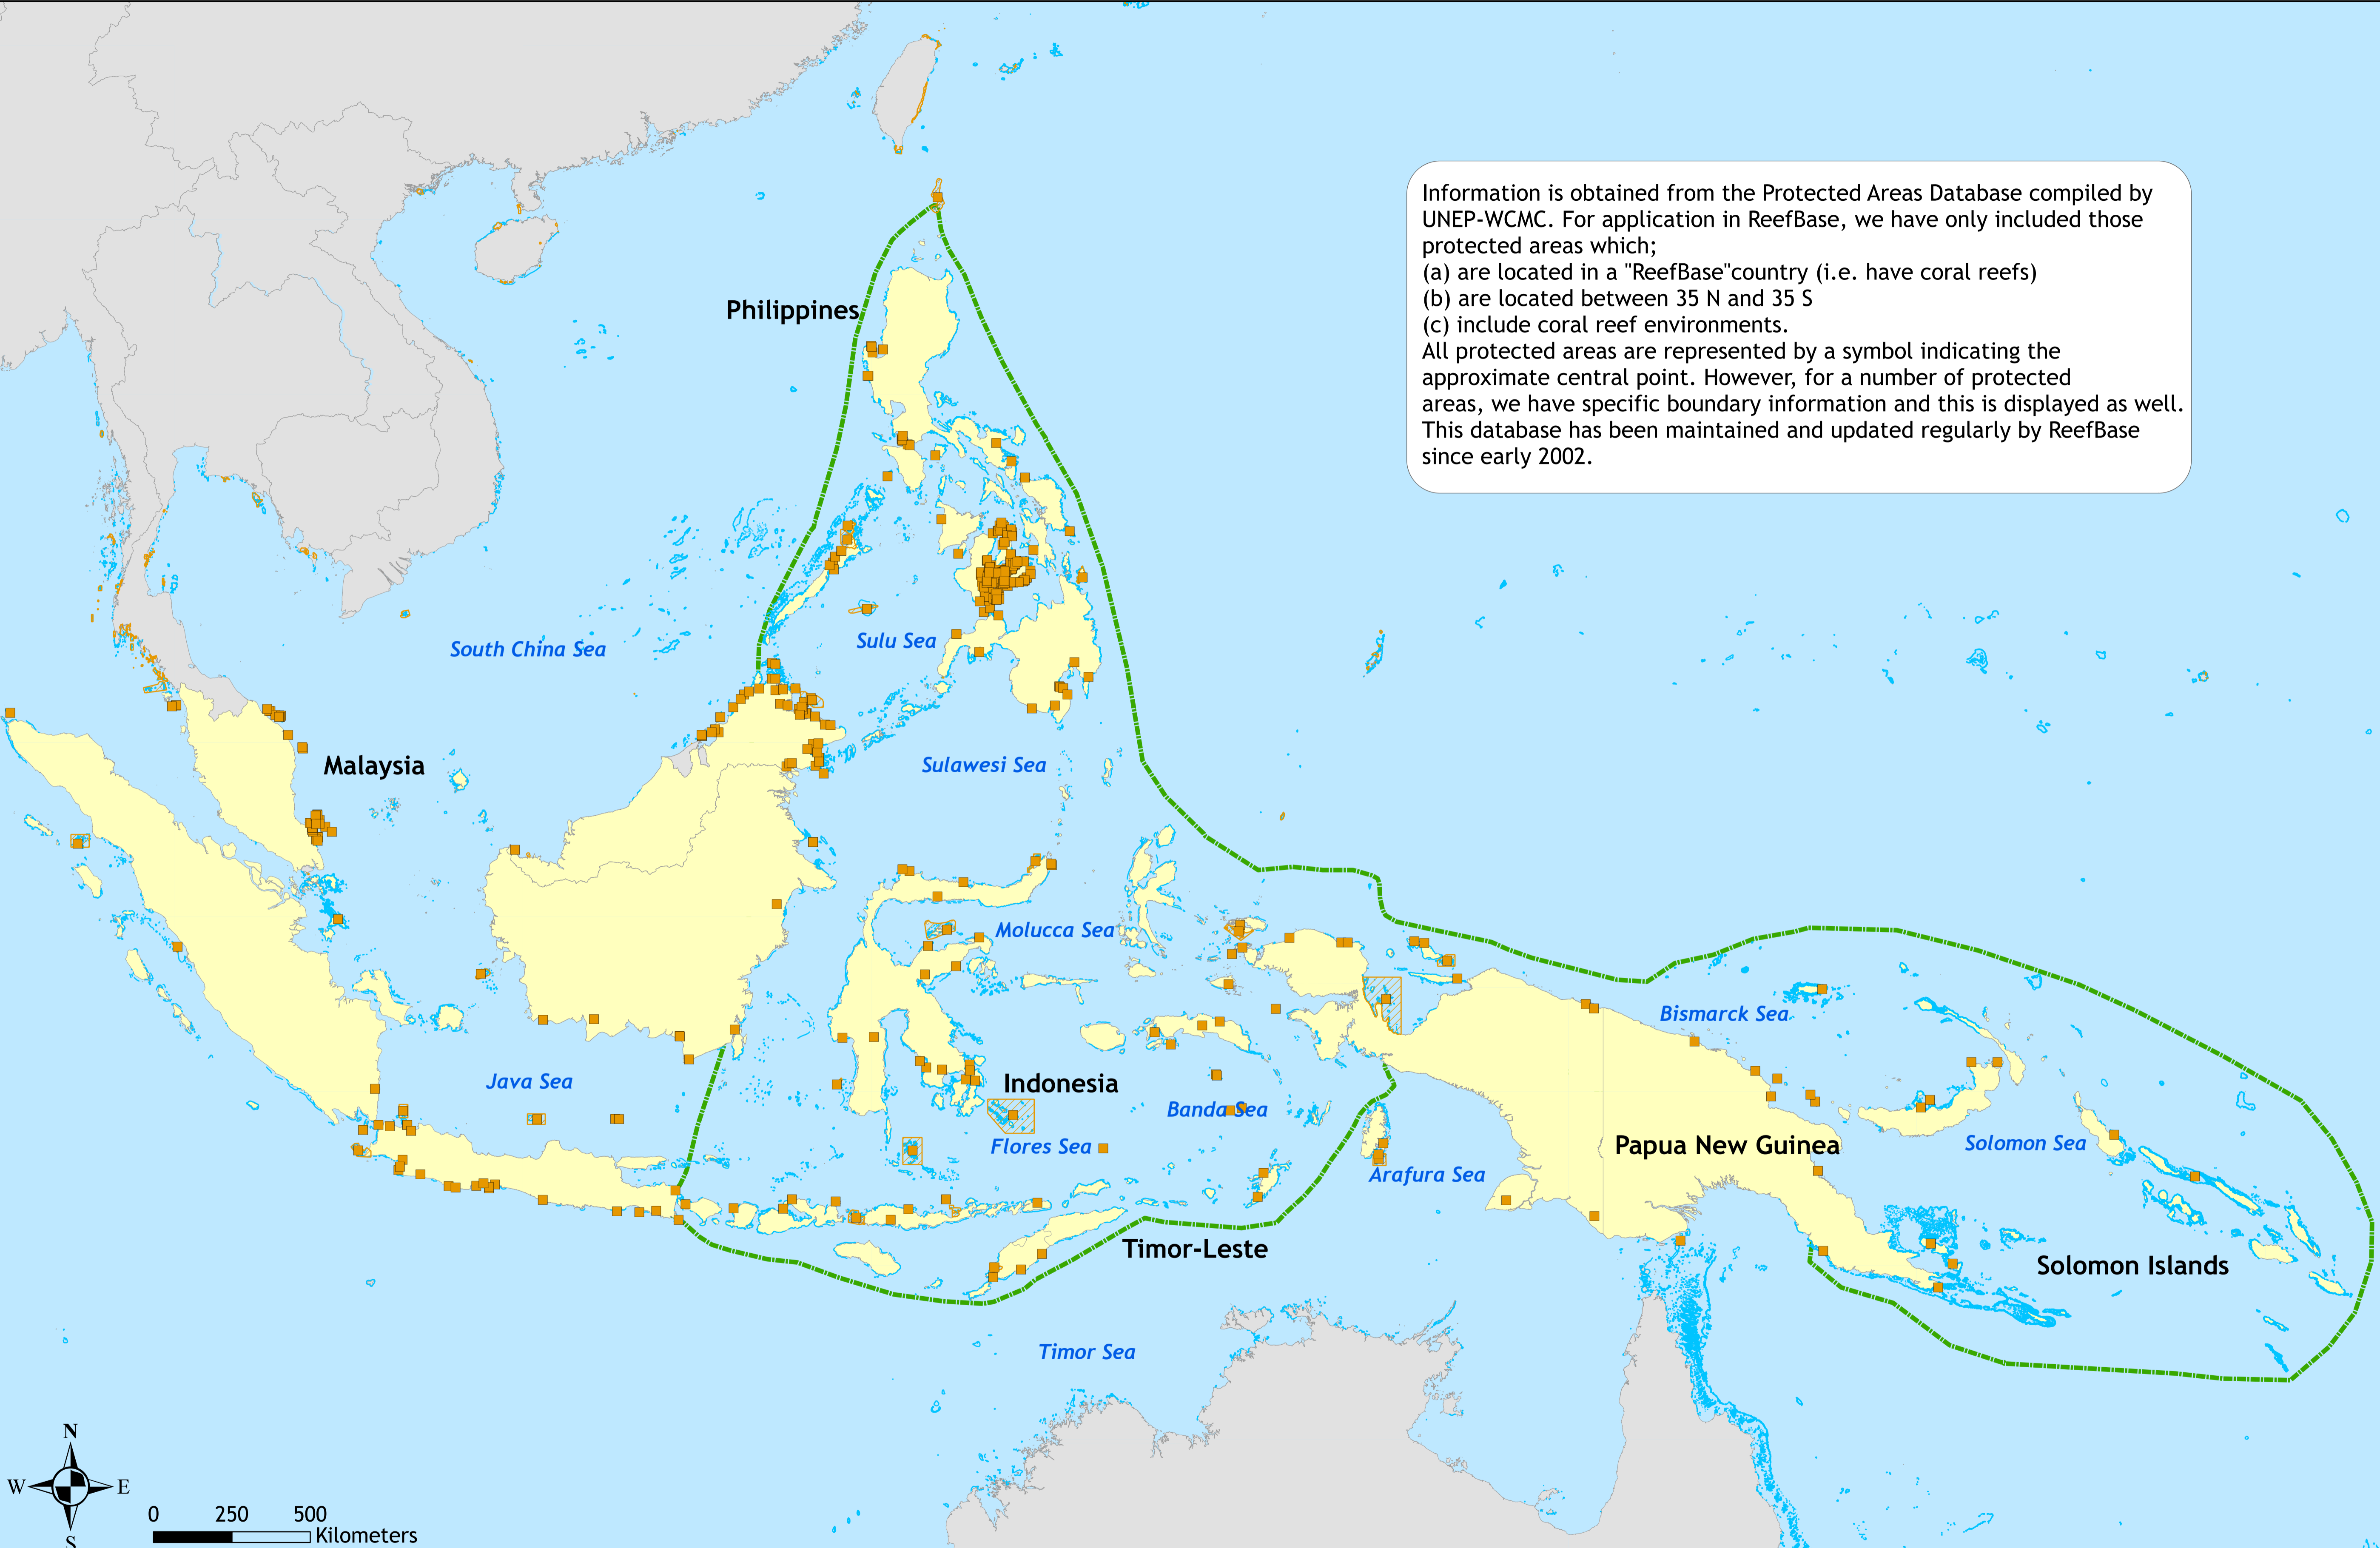

Information is obtained from the Protected Areas Database compiled by UNEP-WCMC. For application in ReefBase, we have only included those protected areas which;

- (a) are located in a "ReefBase" country (i.e. have coral reefs)
- (b) are located between 35 N and 35 S
- (c) include coral reef environments.

All protected areas are represented by a symbol indicating the approximate central point. However, for a number of protected areas, we have specific boundary information and this is displayed as well. This database has been maintained and updated regularly by ReefBase since early 2002.

Legend

- MPA (Point)
- MPA (Polygon)
- CT Boundary
- Coral Reef
